CHEMICAL

SmartPlant 3D, Intergraph's latest 3D plant design solution, is designed to dramatically increase design, modeling, and deliverable production productivity across all key disciplines involved in the design of today's complex chemical plant while increasing overall design quality and data integrity.

Using industry-standard database technologies from Microsoft and Oracle, SmartPlant 3D is a true, data-centric plant modeling environment. This enables the multi-disciplinary design team to create an intelligent 3D plant model from which all intelligent plant deliverables are produced. SmartPlant 3D also includes close integration with fabrication requirements (via SmartPlant Spooleen®) and smaller piping projects (via SmartPlant Isometrics).
